

**ASAS**

## Digitizing Tanzania's \$1.0B per year Rental Market with ASAS.

Whoever controls rental data controls the housing economy. Today, ASAS owns physical assets: tomorrow, ASAS can own Tanzania's digital real estate.

# The Rental Market Is Fragmented, Opaque, and Offline

Tanzania's rental landscape, particularly in urban centers like Dar es Salaam, is characterized by significant inefficiencies and a distinct lack of digital infrastructure.

- **Prevalence of Renting:** Data from the 2022 Population & Housing Census (Dar) reveals that 44.4% of households in Dar es Salaam rent privately, with an overall renter population of 51.1%. This indicates a massive, yet underserved, market segment.
- **Scattered & Outdated Listings:** The current system relies heavily on word-of-mouth, informal brokers, and physical notice boards. Listings are often outdated, inaccurate, or geographically limited.
- **Exorbitant Viewing Fees:** Prospective tenants are typically charged TZS 10,000–30,000 per property just to view it, regardless of whether they rent it. This creates a financial burden and disincentive for extensive property search.
- **Fake Listings & Zero Verification:** The unregulated market is rife with fraudulent listings and unscrupulous brokers. There is virtually no standardized verification process, leading to low trust among renters and landlords alike.

- **Manual, Repetitive Search:** The absence of a centralized, digital platform means tenants must physically navigate various neighborhoods, making numerous calls, and incurring significant time and transportation costs. This manual process leads to lost time, wasted money, and immense frustration for all parties involved.

Dar es Salaam Rental Market Fragmentation

## Massive, Under-Digitized Demand in Dar es Salaam

Dar es Salaam, with its burgeoning population and rapid urbanization, presents an immense, largely untapped market for digital rental solutions. Understanding the scale and geographical distribution of this demand is crucial for strategic entry.

❖ **Population & Households:** The city's population is approximately 8 million, translating to roughly 1.5 million rental-seeking households. This staggering number underscores the sheer volume of potential users for a digital platform.

❖ **Dominance of Private Rentals:**

- i. **44.4%** of households rent privately, highlighting the vast informal market that Panga aims to formalize and digitize.
- ii. **2.8%** are employer-provided housing.
- iii. **3.9%** are government-provided housing.
- iv. **26.4%** of buildings are exclusively tenant-occupied, indicating areas with high rental density.

|   |                                              |
|---|----------------------------------------------|
| 1 | <b>Kinondoni</b><br>50.3% private rentals    |
| 2 | <b>Temeke</b><br>45.1% private rentals       |
| 3 | <b>Ubungu</b><br>44.9% private rentals       |
| 4 | <b>Kigamboni</b><br>40.7% private rentals    |
| 5 | <b>City Council</b><br>40.5% private rentals |

Mini data showing private rental percentages by council (2022 Census Data).

## Massive, Under-Digitized Demand in Dar es Salaam

Using privately rented households as the base case (44.4% of total), with an average monthly rent of TZS 250,000 (equivalent to TZS 3,000,000 annually per household), and applying this to 843,600 privately rented households, the total annual private rental flow amounts to TZS 2,530,800,000,000 (~ TZS 2.531 trillion). Converted at an exchange rate of TZS 2,500 per USD, this equals approximately USD 1,012,320,000, or about USD 1.01 billion. Thus, under a conservative mid-market rent assumption, Dar es Salaam's private rental market is valued at roughly USD 1.0 billion per year..

## Landlords Lack Reach, Data & Tenant Screening

While tenants face significant hurdles, landlords in Tanzania also grapple with a host of challenges that hinder efficient property management and tenant acquisition.

- ❑ **Hyper-local Reach:** Landlords often rely on limited, local networks to advertise their properties. This restricted reach results in slower occupancy rates and higher vacancy periods, directly impacting their rental income.
- ❑ **No Standardized Screening:** The absence of a formal screening process means landlords have limited tools to assess potential tenants' reliability, payment history, or background. This increases the risk of problematic tenancies and property damage.
- ❑ **Manual Processes:** Lease agreements, rent collection, and maintenance requests are predominantly manual, time-consuming, and prone to errors. There's no digital trail for accountability or record-keeping.
- ❑ **Lack of Centralized Marketplace:** Unlike developed markets, Tanzania lacks a single, trusted online platform where landlords can list properties, manage inquiries, and connect with a broad pool of pre-vetted tenants.
- ❑ **Absence of Analytics:** Landlords operate without access to vital market data—such as average rental prices in specific areas, demand trends, or property performance insights. This lack of data prevents optimized pricing and strategic property development.

## Why ASAS Wins with Panga

The synergy between ASAS Group's established market presence and Panga's innovative digital solution creates an unparalleled opportunity to dominate Tanzania's rental market. This partnership is not just an investment; it's a strategic move to expand ASAS's influence into the digital real estate sphere.

- ❑ **Real Estate Management:** ASAS already manages property portfolios and works with developers. Panga complements this by digitizing rentals through verified listings and AI matching. Together, they shorten vacancy cycles, increase property values, and enable ASAS to scale its real estate footprint.
- ❑ **Tech-Forward Leadership:** ASAS's demonstrated appetite for youth-centric innovation and digital transformation aligns perfectly with Panga's vision. Asas' leadership is key to embracing this bold, new venture.
- ❑ **Financial Strength:** ASAS's robust financial position ensures the necessary capital injection for Panga to scale rapidly and capture first-mover advantage.
- ❑ **Retail, Logistics, Beverage Assets:** ASAS's diversified portfolio offers unique avenues for integrated marketing and service delivery. Imagine Panga kiosks within ASAS retail outlets, or logistics support for tenant move-ins.
- ❑ **Hyperlocal FieldOps Network:** Panga's unique model leverages a network of trained zonal agents. This localized presence enables in-person verification of properties, guided viewings, and crucial on-ground support—a critical differentiator in a low-trust market.
- ❑ **Government-Aligned Data Lens:** Panga utilizes a sophisticated understanding of the 2022 Census data, ensuring our platform is built upon accurate, granular insights into Tanzania's housing landscape. This data-driven approach minimizes risk and maximizes targeting efficiency.
- ❑ **AI-Powered Matching & Accessibility:** Our platform employs AI for smart listing and tenant matching, significantly reducing search time. Critically, Panga ensures broad accessibility through a robust WhatsApp integration for low-data users, with a USSD roadmap to capture the widest possible market.
- ❑ **Agile & Scalable Technology:** Panga's tech stack is designed for rapid development and scalability, allowing for quick adaptation to market needs and efficient expansion across the country.

# ASAS Synergy: Revenue & Value Capture

1. Panga enables ASAS to enter PropTech without heavy upfront risk.
2. Together, ASAS and Panga create the ultimate ecosystem. ASAS dominates the physical economy while Panga builds its digital twin.
3. Exclusive ad inventory in Panga app for ASAS brands.

4. Once proven, this framework extends into other verticals, Airbnb-style rentals, offices, and hotels. Anchoring ASAS as Tanzania's rental super platform.
5. ASAS requires accurate insights to expand strategically. Panga generates anonymized rental heatmaps and settlement flow data, which highlight urban hotspots.

Structure: revenue share + equity appreciation.

# Panga: App + WhatsApp Bot + FieldOps

Panga offers a comprehensive, multi-channel solution designed to cater to the diverse technological capabilities and preferences of Tanzanian renters and landlords, ensuring maximum accessibility and efficiency.

## Tenant App

A user-friendly mobile application providing a superior browsing experience with photo-first listings, advanced filters (e.g., location, price, amenities), saved homes functionality, and in-app scheduling for property visits. Designed for a seamless and intuitive user journey.

## WhatsApp Bot

Recognizing the prevalence of WhatsApp in Tanzania, our bot enables accessible property discovery, viewing requests, and direct support for users with limited data or smartphone access. This democratizes access to listings, reaching a broader demographic.

## FieldOps

Our critical differentiator: a network of trained zonal agents. These FieldOps personnel are responsible for physically verifying listings (ensuring authenticity and geo-tagging photos), escorting potential tenants for viewings, and providing real-time synchronization with landlords for updates and approvals. This builds crucial trust and bridges the digital-physical gap.

## Admin & Landlord Tools

A dedicated web portal for landlords and Panga administrators. Features include streamlined listing approvals, automated contract PDF generation, real-time status tracking of inquiries and viewings, and comprehensive tenant management functionalities.

## From Discovery to Contract—Frictionless

Panga's platform is meticulously designed to guide users through every step of the rental process, transforming a historically cumbersome experience into a smooth, transparent, and efficient journey.

1

### 1. Discover

Tenants explore verified listings via the Panga App or WhatsApp bot, accessing a wide range of properties with rich media.

2

### 2. Filter/Match

AI-powered algorithms and intelligent filters help tenants quickly find properties that perfectly match their specific needs and preferences.

3

### 3. Book Viewing

Seamlessly schedule property viewings directly through the platform, with automated notifications to both tenant and FieldOps agent.

4

### 4. FieldOps Escort

A trusted Panga FieldOps agent escorts the tenant to the property, answers questions, and ensures a secure viewing experience.

5

### 5. Digital Lease

Upon selection, the lease agreement is digitally generated and signed securely within the platform, streamlining paperwork.

6

### 6. Move-in + Support

Post-contract, Panga provides move-in checklists and ongoing support for any tenancy-related inquiries or issues.

# Year-1 Targets: Dar-Only

Our aggressive yet achievable year-one targets focus exclusively on the Dar es Salaam market, leveraging its high density of renters to establish market leadership before national expansion.

**1. Marketing Investment:** A focused marketing budget of **\$50,000–\$100,000** will be deployed across a strategic mix of channels to maximize reach and conversion:

- **Digital:** Instagram, Twitter (now X), and targeted social media campaigns.
- **Traditional:** Radio and TV spots during peak listenership, strategic billboard placements in high-traffic rental areas.
- **Influencer Marketing:** Collaborations with local social media personalities to drive engagement and trust.

## 2. Key Performance Indicators (KPIs):

- **10,000 active tenants:** This represents a strong initial user base, establishing Panga as the go-to platform.
- **1,000 registered landlords:** Critical for building a robust supply side and ensuring diverse property options.
- **3,000 active units listed:** A healthy inventory ensures tenants have ample choice, driving retention and new user acquisition.

## Revenue Streams (Years 1-2)

Panga's early-stage business model is designed for sustainable growth, diversifying revenue sources beyond traditional commissions to build a robust and resilient financial foundation.

- Tenant Subscription:** A nominal annual fee of TZS 10,000/year for tenants to access verified listings, smart matching, FieldOps assistance, and digital lease services. This ensures a consistent revenue base from our primary user group.
- Monthly Rental Commission:** A 5% monthly commission charged to tenants for rentals facilitated and formalized through the Panga platform. This incentivizes landlords to use our system for verified, long-term tenants and offers tenants peace of mind.
- Advertising & Promotional Services:**
  - **Location-Based Retail Promotions:** Partnerships with local retailers and ASAS's own retail network to offer location-based ads to tenants.
  - **Beverage & Moving Services:** Leveraging ASAS's beverage distribution network and partnering with moving companies to offer promotional packages to new renters on the platform. This creates additional revenue streams and enhances user experience.
- Data Monetization (Anonymized Insights):** Aggregated and anonymized rental data (e.g., density trends, pricing fluctuations by area, demand patterns for specific property types) can be valuable to urban planners, developers, and financial institutions. This provides a high-margin, scalable revenue stream without compromising user privacy.
- Future Expansion (Post Year 2):** Featured listings for landlords will be introduced once we achieve significant tenant scale (Year 3+), allowing landlords to pay for increased visibility. This ensures our focus remains on tenant acquisition and platform utility in the early stages.

### Tenant Acquisition Surge

Tenant base grows to 25,000

### Base Average Rent

TZS 250,000/month is the average rental cost in Dar es Salaam

### Tenant Acquisition

10,000 tenants are expected to be acquired in the first year

### Base Average Rent

TZS 250,000/month is the average rental cost in Dar es Salaam

## Per-Tenant Economics (Base Case)

## Revenue Streams Expectations (Years 1-2)

# Trustworthy by Design

Panga is built on a foundation of trust, transparency, and exceptional user experience. Every design and feature decision prioritizes safety, clarity, and ease of use, ensuring both tenants and landlords feel secure and empowered.

- **Verified Listings:** Our core commitment is authenticity. All properties undergo rigorous verification, including geo-tagged photos and physical inspections by our FieldOps team. This eliminates fake listings and builds landlord credibility.
- **AI Recommendations + WhatsApp Support:** Intelligent algorithms provide personalized property recommendations, while our accessible WhatsApp bot offers instant, human-like support, ensuring no user is left behind regardless of their digital literacy.
- **Digital Lease PDFs; Receipts; Notifications:** Formalizing the rental process with legally sound digital lease agreements, automated receipts for payments, and timely notifications for viewings, rent due dates, and maintenance updates. This provides transparency and accountability.
- **Clean, Editorial UI:** Our user interface is designed with a "less is more" philosophy. Clean lines, intuitive navigation, photo-first displays, semi-transparent overlays for information, and rounded Call-To-Action (CTA) buttons create a visually appealing and effortless user experience.
- **Emphasis on Privacy & Security:** Robust data encryption and privacy protocols are integrated into the platform's architecture to protect user information and build long-term trust.

# FieldOps: How We Onboard & Sync Landlords

Panga × ASAS: Execution, Unit Economics, and the Ask

- Zonal routing (Kinondoni, Temeke, Ubungu, Kigamboni, City).
- **Two-way sync:** FieldOps schedules viewings with tenants; coordinates landlord availability via portal/WhatsApp.
- Landlord incentives: free listing, faster fill, optional screening; minimal disruption.
- Quality control: geo-tag verification + timestamped photos.

# App + WhatsApp + Admin + Landlord = One Data Spine

Data model: users, listings, chats, bookings, payments, documents.

Privacy: anonymization for analytics; role-based access.

# Where to Win First (Dar es Salaam)

## Kinondoni Municipal

- 50.3% of households rent privately about 240,000 households.
- With 31.9% of buildings tenant-only, Kinondoni clearly has the densest concentration of renters.
- This means nearly 1 in every 2 homes in Kinondoni is rented, making it the strongest launchpad for Panga.

## Temeke Municipal

- 45.1% of households rent privately around 210,000 households.
- Tenant-only buildings are at 23%, showing slightly fewer multi-tenant properties but still a robust rental culture. Temeke offers strong penetration in lower to mid-income segments

## Ubungo Municipal

- 44.9% of households rent privately about 200,000 households.
- Ubungo is a hotspot for students and young professionals

## Dar City Council

- 40.5% privately rented households 190,000 households.
- This area is more mixed-use (commercial + residential)

## Kigamboni Municipal

- 40.7% privately rented households 170,000 households.
- A rapidly developing area with ongoing real estate expansion.
- While smaller in current volume, it is poised for growth and represents a future-facing market for Panga.

Source: 2022 Population & Housing Census; Tanzania Building Census (26.4% buildings tenant-occupied region-wide).

Influencers + micro-creators; radio/TV bursts; OOH in hotspots.

### Strategic Partnerships

Activations (co-branding); QR to WhatsApp flows.

### Organic Growth

Referral rewards (tenant-to-tenant).

# The Face of the Revolution

“

Diamond Platnumz Brand Ambassador

*“A quote for brand ambassador launch”*

”

## Massive Reach

- **30M+ followers** across platforms
- Authentic connection with target demographic
- Pan-African influence and credibility

## Strategic Partnership

- **2-20% equity stake** for full integration
- Campaign across media and music platforms
- Direct access to core user base

# Building Unstoppable Momentum

- 1 — Phase 1: Teaser (First 30 Days)  
Build curiosity with provocative, unbranded billboards asking *"Kwanini umlipe dalali gharama ya kuona nyumba?"*
- 2 — Phase 2: The Reveal (Launch Day)  
Generate mass buzz with Diamond Platinumz endorsement and branded billboard transformation
- 3 — Phase 3: App Launch (Weeks 2-5)  
Drive downloads through full media blitz across TV, YouTube, and social with clear CTAs: *"Download Panga sasa"*
- 4 — Phase 4: Sustained Growth (Months 2-3)  
Fuel retention and growth with referral programs, university partnerships, and on-ground events

## 6-Week Launch Plan

### Week 1

Teaser billboard campaign goes live across Dar es Salaam

### Week 2

Diamond Platinumz creates all video and audio assets for campaign

### Week 3

Reveal campaign begins; Diamond goes public with partnership announcement

### Weeks 3-4

App launch ads deployed across all digital and traditional media channels

### Weeks 4-6

On-ground activation teams deployed with QR stands and branded gear in target wards

| Item                              | Estimated Cost (TZS) | Notes                                   |
|-----------------------------------|----------------------|-----------------------------------------|
| Billboard design & printing       | 15,000,000           | 20-30 billboards total                  |
| Billboard media (4-6 weeks)       | 40,000,000           | Top 5 wards × major routes              |
| Diamond Platnumz Partnership      | 0 (upfront)          | Compensated with up to 20% equity stake |
| Social media ads (FB, IG, TikTok) | 10,000,000           | 4-week intense targeting                |
| Influencer production             | 5,000,000            | Editing, studio, short skits            |
| On-ground activation & QR stands  | 6,000,000            | 10 agent booths + merch                 |
| Referral incentives               | 2,000,000            | Reward early adopters                   |
| Video Ad Production               | 8,000,000            | Includes script, drone shots            |
| Airtime (TV/Radio slots)          | 6,000,000            | Clouds, Wasafi FM, EATV                 |
| Total Estimated Budget            | 92,000,000 TZS       | Can be adjusted per budget              |

## Expected Marketing Budget

- Key components include billboard design and printing (TZS 15,000,000) to produce 20–30 high-visibility boards, complemented by billboard media placement (TZS 40,000,000) across the top five wards and major routes for 4–6 weeks. A high-profile Diamond Platnumz partnership is proposed with no upfront cost, structured instead around up to 20% equity in exchange for brand endorsement.
- Digital promotion will be driven by social media ads on Facebook, Instagram, and TikTok (TZS 10,000,000) with a 4-week intensive targeting campaign. Supporting this, influencer content production (TZS 5,000,000) will cover editing, studio sessions, and short-form skits to boost engagement. On the ground, activations and QR code stands (TZS 6,000,000) will be deployed through 10 agent booths with branded merchandise, supported by referral incentives (TZS 2,000,000) to reward early adopters.
- Finally, video ad production (TZS 8,000,000) will deliver a high-quality campaign featuring scripts, drone shots, and cinematic storytelling, while airtime on major TV and radio stations (TZS 6,000,000) such as Clouds, Wasafi FM, and EATV will ensure mass reach. Combined, these initiatives will maximize visibility, drive user adoption, and establish strong brand presence within the first year.

# Execution Roadmap & How We De-Risk

Q1-Q2

Dar MVP polish; WhatsApp growth; 3k-5k units; 5k paid tenants.

1

2

Q3-Q4

Scale units to 8k-10k; deepen landlord pipeline; launch landlord screening.

## Listing Verification

Ensuring all properties are legitimate and accurately represented

## Escrow Options

Secure payment handling between tenants and landlords

## Audit Logs

Comprehensive tracking of all system activities

## Privacy Controls

Robust data protection measures for all users

# Panga FieldOps Ltd: Strategic Operations Partnership

To ensure accurate, scalable, and verified property data across urban Tanzania, Panga Inc. will outsource data collection and field verification activities to a wholly separate but strategically aligned operations company—**Panga FieldOps Ltd**.

This company will be run in partnership with a trusted real estate professional (preferably a former dalali with credibility and experience) and will be responsible for recruiting, training, deploying, and compensating field agents who input verified data into the Panga platform.

Dalali Partner Stake

Equity ownership for experienced real estate professional

## Phase 1 Deployment

- **5-10** trained field agents
- Focus on high-density areas
- Comprehensive data verification

Target Verified Listings

Quality assurance benchmark for platform reliability

## Scaling Strategy

- **4** distinct scaling phases
- Risk-contained entity structure
- Allows Panga Inc. product focus

# The Partnership

- **Company Structure: Panga Inc.**

Panga Inc. serves as the parent company and the core engine of the business. It owns the technology platform, brand, customer experience, and strategic partnerships. Within Panga Inc., responsibilities include app development, brand and marketing management, customer support, and ensuring that the platform evolves to meet the needs of both tenants and landlords. Panga Inc. also oversees the backend infrastructure, maintains listing standards, manages contracts, and handles platform fees, creating a centralized governance model that ensures consistency and trust.

- **Panga FieldOps Ltd**

To complement the tech platform, Panga operates a specialized subsidiary called Panga FieldOps Ltd, where ownership is shared with a partner dalali (holding 40%). FieldOps' primary role is to bridge the offline and online rental ecosystems. It recruits, trains, and deploys field agents across different neighborhoods in Dar es Salaam. These agents are equipped with rugged Android devices to collect rental data, verify property details, and assist with tenant visits. FieldOps ensures listings are accurate, credible, and continuously updated, building confidence in the platform for both tenants and landlords.

- **Synergy Between Panga Inc. and FieldOps**

Together, the two entities form a symbiotic structure. Panga Inc. pays FieldOps for each verified listing and tenant conversion, ensuring aligned incentives. FieldOps, in turn, acts as the operational arm of the business, sourcing properties, auditing accuracy, and maintaining strong landlord and community relationships. Meanwhile, Panga Inc. focuses on scaling the digital platform, building partnerships, and innovating new features such as AI-powered matching and WhatsApp automation. This hybrid structure allows Panga to capture the efficiency of digital technology while leveraging trusted, human-led verification to dominate Tanzania's rental market.

# Agent Workforce Design

## University Students

Targeting tech-savvy students from local universities who understand mobile technology and can work flexible hours.

## Community Youth

Local youth with knowledge of neighborhoods and existing community relationships.

## Ex-Dalali

Individuals with existing real estate experience who understand the market challenges.

# Data Collection Workflow

**Quality Control** measures include random spot audits and location cross-checks, AI-assisted duplicate detection at upload, and mandatory NDA agreements for all agents. Access levels are split and assignments are rotated to reduce risks, while cross-verification calls with landlords further strengthen reliability and accountability.

**Fraud Prevention** mechanisms allow tenants to flag suspicious agents or fake listings, while optional NIDA or BRELA verification provides additional assurance for landlords. Geo-fencing ensures agents are physically present at property locations, and image recognition helps confirm property authenticity. Performance-based incentives are also applied to discourage fraudulent behavior and encourage integrity in operations.

# Technology Integration

## Mobile App Features

- Offline data collection capabilities
- Automatic GPS tagging
- Image compression for low-bandwidth areas
- Step-by-step property checklist

## Security Measures

- End-to-end encryption
- Two-factor authentication
- Role-based access control
- Regular security audits

## AI Integration

- Duplicate listing detection
- Image verification algorithms
- Rental price recommendations
- Fraud pattern recognition

# Scaling Strategy

- **Phase 1 (0-3 Months: Pilot Program)** will validate the business model in Sinza and Tabata, two high-demand rental hubs. With 5-10 field agents, the focus will be on testing onboarding processes, verifying data collection quality, and building trust with landlords and tenants. The milestone is 500 verified listings, which will serve as the foundation for driving early user adoption and subscription sign-ups, demonstrating proof of concept.
- **Phase 2 (3-6 Months: Dar es Salaam Expansion)** will strategically scale operations into Kimara, Kigamboni, and Kinondoni. The agent network will grow to 25-30 agents, enabling higher coverage and listing volume. By targeting 2,000 verified listings, the platform will be positioned to monetize at scale through tenant subscriptions and agent commissions. This phase will showcase the ability to capture market share in Tanzania's largest city.
- **Phase 3 (6-12 Months: Further Dar es Salaam Expansion)** will cement Panga's position as the leading rental platform in the city. Expansion into premium and mixed-use neighborhoods such as Masaki, Mikocheni, and surrounding areas will allow access to both mass-market and high-value segments. With a team of 50+ agents and robust quality-control systems, the platform is projected to surpass 10,000 verified listings, unlocking significant recurring revenue and enhancing brand visibility.
- **Phase 4 (12+ Months: Regional & Nationwide Expansion)** will extend operations beyond Dar es Salaam into Tanzania's key urban centers through zonal branches. The focus will be on creating a scalable nationwide network, leveraging the operational playbook proven in earlier phases. By exceeding 10,000+ verified listings nationwide, Panga will transition into a national proptech leader, opening pathways for regional growth across East Africa and potential partnerships with real estate developers, financiers, and telecom operators.

# Funding Request: \$50-\$100k to Prove Dar at Scale

## 12-month goals

- 10k paying tenants
- 1k landlords
- 3k active units
- Positive unit economics

## Deliverable

Clear playbook to scale; optional nationwide rollout plan.

# Let's Build Tanzania's Digital Real Estate Platform

**Panga is not a shop, it's a platform. Once built, it scales without heavy capital expenditure.**

Instead of waiting for global players to eat Tanzania, ASAS can export Tanzanian innovation across East Africa.

We're not asking for millions just a feasible entry ticket to prove Dar. Join us.
